SecuROS™ POS is an intelligent software module for the SecurOS video management platform, which links live video with transaction data from a POS or ATM system. It allows search of specific transactions and review of the exact video archive of that transaction.

SecuROS POS & ATM Transaction Monitoring provides full video documentation on selected transaction IDs, item numbers, terminal numbers, employees, customers, payment details, or stores in any combination you wish.

Compatible with ISS SecurOS
Professional, Premium and
Enterprise

Technology Overview

Hardware-agnostic System

Added toolset for integrated retail surveillance, empowerment of exception reports, and optional shrinkage detection.

Flexibility of Use

SecuROS™ POS can search transaction data by a variety of individual or permutations of multiple search criteria:

- Date and time
- Employee number
- Terminal number
- Item numbers (SKUs)
- Customer transaction amount
- Payment type
- Merchandise returns
- Voided transactions

Event/Reaction Management

Advanced event/response management including time schedule engine, adjustable thresholds, and alarm capabilities

Integrated with SecurOS VMS

Seamlessly works with SecurOS VMS. Integrate with third party systems as well as other SecurOS Analytics modules

Access to Advanced Features

Integrate with other analytics to provide complete solution for recognition of known shoplifter and license plate recognition at gas stations

Applications

- Cash management and checkout
- Inventory management
- Shelf-space management
- Loss prevention
- Labor scheduling / time and attendance
- Scale management

Point-of-Sale & ATM Transaction Monitoring

Key Features

Integration with SecurOS™ VMS

The system works in conjunction with core SecurOS features as well as other SecurOS analytics. SecurOS POS can initiate system actions based on alarm events or unique transaction data.

Advanced Management Capabilities and Permissions

Complete local or remote monitoring and management capability - automatic file transfer to central server location. Data monitoring / retrieval access permissions, rights & privileges based on individual users and/or groups.

System Architecture

Formation of a database with tagged data such as date and time, transaction information, and associated video

System Automation

Advanced event/reaction management capabilities includes time schedule engine, adjustable thresholds, and alarm capabilities and engages automatic notification (phone, email, SMS) system.

Customized Search

Search on a variety of criteria including: date and time, employee number, terminal number, item numbers, customer transaction amount, payment type, credit card, merchandise returns, voided transactions

SDK Support

SDK available for integration with third-party applications.
